CRP Clinical Significance

C-reactive protein (CRP) is an important diagnostic parameter for detecting infection, monitoring the progress and therapeutic effect. The combination of CRP and WBC parameter information helps to identify the differentiation of bacterial infections from viral infections, with high clinical diagnostic and reference value.

CRP Measurement Principle

- ① React with hemocyte remove disturbance
- ② Agglutination reaction of antibody-antigen
- ③ Latex Immunoturbidimetric analysis
- ④ FR-CRP Resulting after calibrated
